JOSÉ CARLOS CHAPARRO

Software Engineer · Backend & Infrastructure

+52 614 215 2635 | jc_chaparro@hotmail.com | linkedin.com/in/jose-c-chaparro | github.com/JoseCarlosChaparro | josechaparro.com

Chihuahua, MX · Open to remote / US relocation · **Mexican & US citizen (no sponsorship required)** · Spanish (native) / English (B2)

Professional Summary

Backend software engineer (Python/FastAPI, PostgreSQL, AWS, Docker) who designs and runs production systems end to end. Built Moneta Market's first containerized AWS platform and its 25-table PostgreSQL schema on RDS, and took over technical leadership of the team's two interns when the lead developer left. Previously extended a VB.NET and SQL Server ERP used by 1,750+ employees across 170+ retail branches. Main contributor to DODFest 2026, built for 5,000 attendees. Mexican and US citizen, available for US remote roles.

Technical Skills

Languages: Python, SQL, TypeScript, JavaScript, VB.NET, C#

Backend & APIs: FastAPI (async), Django, REST APIs, webhooks, Node.js, NestJS, Express, .NET

Databases: PostgreSQL (AWS RDS), SQL Server (stored procedures), Prisma ORM

Cloud & DevOps: AWS (EC2, RDS, S3, IAM, Secrets Manager), Docker Compose, GitLab CI/CD, GitHub Actions, LocalStack, Dokploy, Cloudflare Tunnels, Linux

Testing & Quality: Playwright (end-to-end), k6 (load), unit and integration tests, code review

Frontend & Tools: React, Next.js, Tailwind CSS, Git, GitHub, Claude Code (agentic coding), Microsoft Entra ID SSO, Jira, Confluence

Work Experience

Moneta Market August 2025 – Present

Full Stack Engineer

- Replaced manual deployments with the company's first containerized platform: 6 services on AWS EC2 (Linux) run with Docker Compose, including 2 FastAPI REST microservices.
- Designed the 25-table PostgreSQL schema on AWS RDS that the operation runs on, with idempotent migrations and a soft-delete audit trail, reachable only through an SSH tunnel via an EC2 bastion host.
- Took over technical leadership of the team's two interns when the lead developer left, reviewing their code; had co-supervised them beforehand.
- Built an event-driven FastAPI webhook between Label Studio and S3 with atomic DB/S3 rollback, async connection pooling and an in-memory cache with DB fallback.
- Built the data pipeline's operator tooling (CLIs, idempotent S3–PostgreSQL sync, drift audits) and GitLab CI pipelines that train models on ephemeral AWS GPU instances; set up least-privilege IAM, AWS Secrets Manager and LocalStack for local S3; wrote the team runbooks.

Bifrost Code February 2025 – Present

Co-founder & Full Stack Engineer

independent software studio; part-time, concurrent with the full-time Moneta Market role

- DODFest 2026 (Día de Muertos festival, Amarillo, TX; built for 5,000 attendees): main contributor to the Next.js, TypeScript, PostgreSQL and Prisma platform for registration, QR-wristband and judge voting, and a role-based admin dashboard behind Microsoft Entra ID SSO (about 70% of 1,600+ commits).
- On DODFest, wrote most of the 200+ Playwright end-to-end specs and the k6 load tests for the voting peak.
- Ship and run client products in production end to end on TypeScript pnpm monorepos (React, Next.js, NestJS, Express, PostgreSQL), self-hosted with Docker Compose, Dokploy and Cloudflare Tunnels.

Grupo Roga March 2024 – August 2025

.NET Software Developer

- Maintained and extended a VB.NET ERP used by 1,750+ employees across 170+ branches: POS, inventory, pricing and accounts receivable on .NET Framework.
- Designed SQL Server stored procedures for multi-branch inventory aggregation and pricing, and automated HTML report emails, eliminating manual report compilation for operations.
- Designed and built from scratch the ERP module for the field agents who visit customer homes for credit approval, with maps plotting assignments and data from a companion Android app.

Selected Projects

- **FisioApp:** multi-tenant clinic management in production at Kineia Fisioterapia (patients, clinical records, appointments, payments); Next.js + PostgreSQL, WCAG 2.1 AA audited.
- **Feriu:** multi-tenant shared-expense platform (Splitwise-style settlement engine); NestJS + Next.js monorepo, PostgreSQL.
- **Karaoke Balu:** real-time karaoke request platform (SSE-synced queue, kiosk mode); Express + React.

Education

Autonomous University of Chihuahua 2018 – 2023

Bachelor of Science in Computer Science Engineering

GPA 9.2/10 (Universidad Autónoma de Chihuahua); degree awarded by academic merit
