Chihuahua, MX · Open to remote / US relocation · **US Citizen (no sponsorship required)** · Spanish (native) / English (B2, upper-intermediate)

Professional Summary

Full stack engineer who builds products end to end and runs the infrastructure under them. Designed and built Moneta Market's production platform, six containerized services on AWS, plus an on-device computer-vision pipeline on NVIDIA Jetson, and led the team's two interns after the lead developer left. Co-founded Bifrost Code, which ships and self-hosts three client products in production. Previously extended an ERP used by 1,750+ employees across 170+ retail branches.

Technical Skills

Programming Languages: TypeScript, JavaScript, Python, C#, SQL

Frontend: React, Next.js, Tailwind CSS, React Native, Avalonia (desktop)

Backend: FastAPI, NestJS, Express (Node.js), Django, .NET Framework

Databases: PostgreSQL, SQL Server, SQLite

Cloud & DevOps: AWS (EC2, RDS, S3, IAM, Secrets Manager), Docker, Docker Compose, Nginx, Cloudflare, Dokploy, Backblaze B2, Git, GitHub Actions, GitLab CI/CD, Linux

Computer Vision & Edge: Ultralytics YOLO, TensorRT, ONNX, OpenCV, NVIDIA Jetson

Work Experience

Moneta Market

August 2025 – Present

Full Stack Engineer

- Replaced manual deployments with the company's first containerized platform: 6 services on AWS EC2 (Linux) run with Docker Compose (2 FastAPI microservices, Label Studio, MLflow, Nginx reverse proxy).
- Built an on-device vision pipeline on NVIDIA Jetson Orin Nano that counts products taken from a retail cooler (TensorRT FP16, 60 fps tracking, SIFT camera recalibration); its evaluation harness set the production frame-rate and image-format requirements.
- Led the team's two interns after the lead developer left, having co-supervised them before.
- Designed the 25-table PostgreSQL schema on AWS RDS that the operation runs on (24 foreign keys, 34 indexes, idempotent migrations, soft-delete audit trail), reachable only through an SSH tunnel via an EC2 bastion host.
- Built an event-driven FastAPI webhook between Label Studio and S3 with atomic DB/S3 rollback, async connection pooling and an in-memory cache with DB fallback; wrote the team runbooks.
- Migrated the frame-review desktop app from Windows-only WPF to cross-platform C# (.NET 10, Avalonia): MVVM, two-pass verification, sliding-window prefetch cache.
- Built the data pipeline's operator tooling (CLIs, idempotent S3-PostgreSQL sync, drift audits) and automated model training via GitLab CI on ephemeral AWS GPU instances with MLflow tracking.
- Set up least-privilege IAM, AWS Secrets Manager, LocalStack for local S3 and the CI pipelines.

Bifrost Code

February 2025 – Present

Co-founder & Full Stack Engineer

independent software studio; side project in my own time, alongside the full-time Moneta Market role

- Ship and run three client products in production (FisioApp, Feriu, Karaoke Balu) end to end on TypeScript pnpm monorepos: React, Next.js, NestJS, Express, PostgreSQL. Earlier projects shipped with FastAPI, Django and React Native.
- Self-host every client app on the studio's own infrastructure as a low-cost alternative to Vercel/AWS: Proxmox VM (Ubuntu Server), Dokploy, Docker Compose health checks and Cloudflare Tunnels.

Grupo Roga

March 2024 – August 2025

.NET Software Developer

- Maintained and extended a mission-critical VB.NET ERP used by 1,750+ employees across 170+ branches (Mueblería El Pasito / Villarreal Muebles / Dinexpress): POS, inventory, pricing and accounts receivable on .NET Framework.
- Designed and built from scratch the ERP module for the field agents who visit customer homes for credit approval, with DevExpress maps plotting assignments and data from a companion Android app.
- Designed SQL Server stored procedures for multi-branch inventory aggregation and pricing, and automated HTML report emails (Chilkat), eliminating manual report compilation for operations.

Selected Projects

Bifrost Code side projects, running in production

- FisioApp:** multi-tenant clinic management (patients, clinical records, appointments, payments); Next.js + PostgreSQL, WCAG 2.1 AA audited, automated off-site backups via cron to Backblaze B2.
- Feriu:** multi-tenant shared-expense platform (Splitwise-style settlement engine); NestJS + Next.js monorepo, PostgreSQL.
- Karaoke Balu:** real-time karaoke request platform (SSE-synced queue, kiosk mode, Virtual DJ integration); Express + React.

Education

Autonomous University of Chihuahua

2018 – 2023

Bachelor of Science in Computer Science Engineering

GPA 9.2/10 (Universidad Autónoma de Chihuahua); degree awarded by academic merit
