Chihuahua, MX · Open to remote / US relocation · **US Citizen (no sponsorship required)** · Spanish (native) / English (B2, upper-intermediate)

Professional Summary

Full Stack Engineer with 2+ years of production experience: React, Next.js and TypeScript front ends, Python (FastAPI) and .NET (C#, VB.NET) backends, and infrastructure on AWS and Linux. Designed and built a containerized ML platform and an on-device vision pipeline; previously maintained an ERP serving 170+ branches and 1,750+ employees. Works across the full SDLC and led two interns after the lead developer's departure.

Technical Skills

Programming Languages: TypeScript, JavaScript, Python, C#, SQL

Frontend: React, Next.js, Tailwind CSS, React Native, Avalonia (desktop)

Backend: FastAPI, NestJS, Express (Node.js), Django, .NET Framework

Databases: PostgreSQL, SQL Server, SQLite

Cloud & DevOps: AWS (EC2, RDS, S3, IAM, Secrets Manager), Docker, Docker Compose, Nginx, Cloudflare, Dokploy, Backblaze B2, Git, GitHub Actions, GitLab CI/CD, Linux

Computer Vision & Edge: Ultralytics YOLO, TensorRT, ONNX, OpenCV, NVIDIA Jetson

Work Experience

Moneta Market

August 2025 – Present

Full Stack Engineer

- Architected the company's first containerized platform on AWS EC2 (Linux): 6-service Docker Compose stack (2 FastAPI microservices, Label Studio, MLflow, Nginx reverse proxy) replacing manual deployment with reproducible automation.
- Designed a 25-table PostgreSQL schema on AWS RDS (24 foreign keys, 34 indexes, idempotent migrations, soft-delete audit trail) accessed through an SSH tunnel via an EC2 bastion host.
- Built an event-driven FastAPI webhook integrating Label Studio with S3: atomic DB/S3 rollback, async connection pooling, in-memory cache with DB fallback; wrote team runbooks.
- Developed a cross-platform C# desktop app (.NET 10, Avalonia, migrated from WPF) for human review of ML-labeled frames: MVVM, two-pass verification, sliding-window prefetch cache.
- Built the data pipeline's operator tooling (CLIs, idempotent S3-PostgreSQL sync, drift audits) and automated model training via GitLab CI on ephemeral AWS GPU instances with MLflow tracking.
- Built an on-device vision pipeline on NVIDIA Jetson Orin Nano (TensorRT FP16, 60 fps tracking, SIFT camera recalibration) that counts products taken from a retail cooler; its evaluation harness set the production frame-rate and image-format requirements.
- Led two interns after the lead developer left (co-supervised them before); set up least-privilege IAM, AWS Secrets Manager, LocalStack for local S3 and CI pipelines.

Bifrost Code

February 2025 – Present

Co-founder & Full Stack Engineer

independent software studio; side project in my own time, alongside the full-time Moneta Market role

- Deliver full-stack web apps end-to-end (React, Next.js, NestJS, Express on TypeScript pnpm monorepos, PostgreSQL), self-hosted on the studio's own infrastructure – Proxmox VM (Ubuntu Server) with Dokploy, Docker Compose health checks and Cloudflare Tunnels, a low-cost alternative to Vercel/AWS. Earlier projects shipped with FastAPI, Django and React Native.

Grupo Roga

March 2024 – August 2025

.NET Software Developer

- Maintained and extended a mission-critical VB.NET ERP serving 170+ branches and 1,750+ employees (Mueblería El Pasito / Villarreal Muebles / Dinexpress), spanning POS, inventory, pricing and accounts receivable on .NET Framework.
- Built from scratch an ERP module managing the field agents who visit customer homes for credit approval: full design ownership, DevExpress map controls plotting assignments geographically, consuming data from a companion Android app.
- Designed SQL Server stored procedures for multi-branch inventory aggregation and pricing, and automated HTML report emails (Chilkat), eliminating manual report compilation for operations.

Selected Projects

Bifrost Code side projects, running in production

- FisioApp:** multi-tenant clinic management (patients, clinical records, appointments, payments); Next.js + PostgreSQL, WCAG 2.1 AA audited, automated off-site backups via cron to Backblaze B2.
- Feriu:** multi-tenant shared-expense platform (Splitwise-style settlement engine); NestJS + Next.js monorepo, PostgreSQL.
- Karaoke Balu:** real-time karaoke request platform (SSE-synced queue, kiosk mode, Virtual DJ integration); Express + React.

Education

Autonomous University of Chihuahua

2018 – 2023

Bachelor of Science in Computer Science Engineering

GPA 9.2/10 (Universidad Autónoma de Chihuahua); degree awarded by academic merit
