Professional Profile

Full Stack Engineer with 2+ years of production experience building backend systems in Python (FastAPI) and .NET (C#, VB.NET) on AWS and Linux. Shipped a containerized ML platform from scratch; previously maintained an ERP serving 170+ branches and 1,750+ employees. Owns the full SDLC: requirements, coding, QA, deployment, and production support.

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, C#, SQL

Backend: FastAPI, NestJS, Express (Node.js), Django, .NET Framework

Frontend: React, React Native, Next.js

Databases: PostgreSQL, SQL Server

Cloud & DevOps: AWS (EC2, RDS, S3, IAM, Secrets Manager), Docker, Docker Compose, Nginx, Cloudflare, Dokploy, Git, GitHub Actions, GitLab CI/CD, Linux

Work Experience

Full Stack Engineer, *Moneta Market*

August 2025 – Present

- Architected the company's first containerized platform on AWS EC2 (Linux): 6-service Docker Compose stack (2 FastAPI microservices, Label Studio, MLflow, Nginx reverse proxy) replacing manual deployment with reproducible automation.
- Designed a 25-table PostgreSQL schema on AWS RDS (24 foreign keys, 34 indexes, idempotent migrations, soft-delete audit trail) accessed via SSH tunnel through EC2 bastion host.
- Built an event-driven FastAPI webhook integrating Label Studio with S3: atomic DB/S3 rollback, async connection pooling, in-memory cache with DB fallback; wrote team runbooks.
- Developed a cross-platform C# desktop app (.NET 10, Avalonia, migrated from WPF) for ML-frame human review: MVVM, two-pass verification, sliding-window prefetch cache.
- Built the pipeline's operator tooling (CLIs, idempotent S3-PostgreSQL sync, drift audits) and automated model training via GitLab CI on ephemeral AWS GPU instances with MLflow tracking; prototyped edge inference on NVIDIA Jetson (YOLO on TensorRT).
- Set up least-privilege IAM, AWS Secrets Manager, LocalStack for local S3, and CI pipelines; co-supervise 2 interns with the lead developer.

Full Stack Engineer & Co-founder (Part-time), *Bifrost Code – independent software studio* *concurrent with Moneta Market role*

February 2025 – Present

- Deliver full-stack web apps end-to-end (React, Next.js, NestJS, Express on TypeScript pnpm monorepos, PostgreSQL), self-hosted on the studio's own infrastructure – Proxmox VM (Ubuntu Server) with Dokploy, Docker Compose, and Cloudflare Tunnels, a low-cost production alternative to Vercel/AWS. Earlier delivered projects shipped with FastAPI, Django, and React Native.

.NET Software Developer, *Grupo Roga*

March 2024 – August 2025

- Maintained and extended a mission-critical VB.NET ERP serving 170+ branches and 1,750+ employees (Mueblería El Pasito / Villarreal Muebles / Dinexpress), spanning POS, multi-branch inventory, pricing, and accounts receivable modules on .NET Framework.
- Built from scratch an ERP module managing the field agents who visit customer homes for credit approval: full design ownership, DevExpress map controls plotting assignments geographically, consuming data from a companion Android app.
- Designed SQL Server architecture for multi-branch retail: stored procedures for inventory aggregation and pricing, automated reporting via SQL Server Agent jobs, eliminating manual report compilation for operations.

Selected Projects (Bifrost Code, in production)

- **FisioApp** – multi-tenant clinic management (patients, clinical records, appointments, payments); Next.js + PostgreSQL, WCAG 2.1 AA audited.
- **Feriu** – multi-tenant shared-expense platform (Splitwise-style settlement engine); NestJS + Next.js monorepo, PostgreSQL.
- **Karaoke Balu** – real-time karaoke request platform (SSE-synced queue, kiosk mode, Virtual DJ integration); Express + React.

Education

Bachelor of Science in Computer Science Engineering, Universidad Autónoma de Chihuahua – GPA 9.2/10, graduated by academic merit
2018 – 2023
