JOSÉ CARLOS CHAPARRO

Software Engineer · Full Stack & Platform

+52 614 215 2635 | jc_chaparro@hotmail.com | linkedin.com/in/jose-c-chaparro | github.com/JoseCarlosChaparro | https://www.josechaparro.com
Chihuahua, MX · Open to remote / US relocation · **Mexican & US citizen (no sponsorship required)** · Spanish (native) / English (B2, upper-intermediate)

Professional Summary

Full stack software engineer who delivers features end to end, from tech design and REST APIs to tests and production operations. Designed and built Moneta Market's production platform on AWS (containerized services, a 25-table PostgreSQL schema on RDS) and led the team's two interns, reviewing their code, after the lead developer left. Main contributor to DODFest 2026, a TypeScript festival platform built for 5,000 attendees, writing most of its end-to-end and load tests. Uses Claude Code, GitHub and Jira.

Technical Skills

Languages: TypeScript, JavaScript, SQL, Python, C#
Backend & APIs: Node.js, REST APIs, NestJS, Express, Next.js API routes, FastAPI, Django, .NET
Databases: PostgreSQL, SQL Server, SQLite, Prisma ORM
Cloud & DevOps: AWS (RDS, EC2, S3, IAM, Secrets Manager), Docker, GitHub, GitHub Actions, GitLab CI/CD, Linux
Testing & Quality: unit and integration tests, Playwright end-to-end tests, k6 load testing, code reviews
Frontend & Tools: React, Next.js, Tailwind CSS, Claude Code (agentic coding), Jira, Confluence

Work Experience

Moneta Market August 2025 – Present
Full Stack Engineer

- Replaced manual deployments with the company's first containerized platform: 6 services on AWS EC2 (Linux) run with Docker Compose, including 2 FastAPI REST microservices.
- Designed the 25-table PostgreSQL schema on AWS RDS that the operation runs on (24 foreign keys, 34 indexes, idempotent migrations, soft-delete audit trail), reachable only through an SSH tunnel via an EC2 bastion host.
- Built an event-driven FastAPI webhook between Label Studio and S3 with atomic DB/S3 rollback, async connection pooling and an in-memory cache with DB fallback; wrote the team runbooks.
- Led the team's two interns after the lead developer left, reviewing their code, having co-supervised them before.
- Set up least-privilege IAM, AWS Secrets Manager, LocalStack for local S3 and the CI pipelines.
- Built the data pipeline's operator tooling (CLIs, idempotent S3–PostgreSQL sync, drift audits) and automated model training via GitLab CI on ephemeral AWS GPU instances.
- Built an on-device computer-vision pipeline on NVIDIA Jetson (TensorRT, 60 fps tracking) for a retail smart cooler.

Bifrost Code February 2025 – Present
Co-founder & Full Stack Engineer
independent software studio; side project in my own time, alongside the full-time Moneta Market role

- DODFest 2026 (Día de Muertos festival, Amarillo, TX; built for 5,000 attendees): main contributor (about 70% of 1,600+ commits) to the Next.js, TypeScript, PostgreSQL and Prisma platform for registration, QR-wristband and judge voting, and a role-based admin dashboard behind Microsoft Entra ID SSO.
- On DODFest, wrote most of the 200+ Playwright end-to-end specs and the k6 load tests for the voting peak.
- Ship and run client products in production end to end on TypeScript pnpm monorepos (React, Next.js, NestJS, Express, PostgreSQL), self-hosted with Docker Compose, Dokploy and Cloudflare Tunnels.

Grupo Roga March 2024 – August 2025
.NET Software Developer

- Maintained and extended a mission-critical VB.NET ERP used by 1,750+ employees across 170+ branches: POS, inventory, pricing and accounts receivable on .NET Framework.
- Designed and built from scratch the ERP module for the field agents who visit customer homes for credit approval, with maps plotting assignments and data from a companion Android app.
- Designed SQL Server stored procedures for multi-branch inventory aggregation and pricing, and automated HTML report emails, eliminating manual report compilation for operations.

Selected Projects

- **FisioApp:** multi-tenant clinic management in production at Kineia Fisioterapia (patients, clinical records, appointments, payments); Next.js + PostgreSQL, WCAG 2.1 AA audited.
- **Feriu:** multi-tenant shared-expense platform (Splitwise-style settlement engine); NestJS + Next.js monorepo, PostgreSQL.
- **Karaoke Balu:** real-time karaoke request platform (SSE-synced queue, kiosk mode); Express + React.

Education

Autonomous University of Chihuahua 2018 – 2023
Bachelor of Science in Computer Science Engineering
GPA 9.2/10 (Universidad Autónoma de Chihuahua); degree awarded by academic merit
